PROFESSIONAL SUMMARY

Software developer with hands-on experience contributing to production applications and building end-to-end projects from architecture through implementation. Experienced in working within established codebases, translating requirements into maintainable features, validating production behavior, and documenting technical decisions. Comfortable owning tasks that require understanding existing systems, integrating new functionality without disrupting established workflows, and iterating through testing and review. Particularly interested in developer tools, AI-assisted software products, and data-driven applications, with a strong emphasis on security, reliability, and practical problem solving.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML/CSS

Web & Backend: FastAPI, Next.js, React, REST APIs, GitHub OAuth, PKCE, authentication, session management

Data & AI: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Jupyter, exploratory data analysis, data cleaning, ML fundamentals

Databases: PostgreSQL, Neon, Prisma, SQLite

Tools & Platforms: Git, GitHub, Linux/Ubuntu, VS Code, Fabric.js, SVG processing, DOM APIs

EXPERIENCE

Corevo / Unisoft Digital Signage - Software Development Intern

Aug 2026

- Implemented layered SVG import for a production canvas-based template editor using React, TypeScript, Fabric.js, and DOMParser, including allowlist-based parsing and sanitization controls for imported content.
- Processed embedded Base64 images through the existing media infrastructure, uploaded assets through established application flows, and integrated imported canvas objects with automatic viewport fitting, centering, history, and persistence workflows.
- Worked with large SVG files containing 1,000+ vector objects inside an established production codebase; contributed to React/TypeScript frontend components, tested implementation compatibility, and validated production builds through Git-based workflows.

SELECTED PROJECTS

DevLens - AI-Powered Developer Workspace

- Built a FastAPI + Next.js/TypeScript developer workspace for GitHub authentication, repository analysis, user sessions, and AI-assisted development workflows, with PostgreSQL/Neon persistence and APIs designed around authentication and repository-analysis use cases.
- Designed GitHub OAuth with PKCE, HttpOnly cookie sessions, immutable GitHub user IDs, CORS controls, token isolation, and deterministic evidence/scoring where AI remains a supporting interpretation layer rather than the source of truth.

BütçeDostum - Full-Stack Budget Tracking Application

- Built and deployed a full-stack budget tracker with Next.js App Router, React, TypeScript, Prisma, and SQLite, supporting income/expense tracking, category management, daily summaries, search/filtering, and pagination.
- Implemented JWT-based registration and authentication, structured persistent data access with Prisma, and developed responsive application flows for day-to-day personal budget management and transaction tracking.

Customer Churn Analysis - Data Science & Machine Learning

- Analyzed the IBM Telco Customer Churn dataset with 7,043 customers and 21 features; performed data quality checks, exploratory data analysis, churn-distribution review, customer-characteristic analysis, and missing/invalid value handling.
- Created a reusable cleaned dataset and structured the project into raw/processed data, notebooks, figures, metrics, and source-code directories to support repeatable modeling workflows; documented analysis findings and methodology for future modeling work.

EDUCATION & TRAINING

B.Sc. in Computer Engineering - Trakya University

2024 - 2028 (Expected)

Coursework & independent study: programming, algorithms, computer systems, mathematics, and software development

Huawei Student Developers - Data Science & Machine Learning Program | Python for data science, data analysis, preprocessing, exploratory data analysis, and machine learning fundamentals

Huawei ICT Academy - Computer Networks Bootcamp (2026-2027) | Networks 101, HCIA Data Communications, computer networking fundamentals, networking technologies, and infrastructure
